

# LID-WAP version 2 for PSION Work About Pro

## Mobile Data Solution

**DORSET ID**  
IDENTIFICATION

The LID-WAP version 2 decoder is especially designed for the PSION Workabout Pro. It is easy to install on the 100 pin High speed expansion interface.

The LID-WAP can read all Trovan® unique & Flex transponders as well as Destron/Fecava, AVID encrypted, ISO FDX-B, HDX, PSK1, PSK2 and EM4102 (ASK 64bit).

The LID-WAP uses the 3,3V internal power supply of the PSION WAP.

Typical reading distances with the internal ferrite antenna :

| Tag              |  | Max. Read [cm] |
|------------------|--|----------------|
| 12mm Glass       |  | 4,5 cm         |
| 26mm Disc        |  | 6,5 cm         |
| Credit card size |  | 13 cm          |
| Metal mount      |  | 9 cm           |

Besides the standard ferrite antenna, also 'aircoil' antenna's and external pole antennas can be used.

Software is available is available to configure the reader and wedge ID numbers in any software application.
